City on Saint Valentine's Day, Will Observe the Anniversary of Its Incorporation---Some Facts and Figures Concerning "Slow Town" Across the River

EIGHTY years will have passed on Friday, February 14, since Camden became an incorporated city, and not now the citizens are looking back over those years and recalling with a pardonable pride the epochs that have made it a community of homes, of industrial and of clean, progressive government. Unlike Camden, which has comparatively few moss-bunkers and in consequence it has always been in the van of the modern spirit that means progress to American municipalities. With an energetic executive, with a rejuvenated Board of Trade composed of the representative business men of the city and containing residents who are participating in an even greater Camden, the future bids well.

Although there was a settlement in what is now Camden site in the seventeenth century, it did not discard its raddling clothes until long years after. It was in 1828 that the 1143 persons who made up the district bounded by the Delaware river and Sixth street and Cooper and Line street concluded that they should become an incorporated community. This was brought about principally as a result of the crowds that crossed the river from Philadelphia on Sundays and did pretty much as they pleased to the discomfort and anger of the townspeople. No bill was prepared, and on February 14, of that year, the Legislature adopted it, thus making Camden the proud possessor of a charter. Samuel Laning was elected the first Mayor.

No Fair, So Good

This was all very well, but Camdenites chafed over the fact of being a part of Gloucester county. There were those who thought they should have a county of their own, but Gloucester strenuously objected to having such a goodly portion bleed off for the benefit of the new city. Under the leadership of Captain John W. Mickle, however, the Camdenites carried the war into the Legislature and as a result Camden county was created. After this matter went along smoothly until 1848, when the question arose as to which community should be the county seat. Camden was opposed by Long-Come, now Berlin. Matters waded steadily toward the ruralists siding Long-Come, the cities Camden.

Even yet old residents speak of the strenuous times in awesome whispers. Finally the question was decided at a special election and Camden lost. Possessed of that persistency that has made it the success of the city, the residents did not give up by any means. They carried the fight to the Legislature and were elected victorious. This time Camden was the victor. The farmers made all sorts of charges, but Camden remained the county seat and at present the wisdom of that selection is apparent.

Now for Town Hall

Soon after Camden became an incorporated city Mayor Laning and his councilors decided that there must be some municipal meeting place. At first the town hall was located on the second floor of Richard Pette's store at Third and Market streets. But in 1829 City Council voted to set aside \$2500 to build a "City Hall, courthouse and jail." This was located on Federal street, below Fifth, where stood the old market, burned down several years ago. Many ex-

have already proved their value. As to crime there is little of it except of a petty nature and when the occasion arises the majesty of the law is upheld in such a manner as to give the impression that nowhere in the State is there a better explanation of the declaration that "Justice moves swiftly" than in Camden.

And Camden Water

Camden's water is admittedly without a peer. It is drawn from artesian wells and every day over 15,000,000 gallons of it is sent through the mains. This comes from a \$600,000 plant at Morris Station, which is always hailed as "Camden's greatest asset." Plans are under way now to augment this plant. The city's first water plant was established after considerable controversy in 1854 at Pasmora. The Delaware River water was pumped through the mains for years. In consequence the harvest of death from typhoid fever was great. In the months the contagion manifested itself in such an alarming manner that the artesian plant was proposed. It was not put in operation until 1858, but the

change in the water supply was at once apparent in the better health of the city. While a hundred new cases of typhoid fever within a month prior to that time was by no means unusual, subsequent to the installation of the new supply, less than half a dozen were reported within a like period. Last year there were but 28 cases, of this disease and most of them were traced to other cities.

Camden has many miles of paved streets. All the principal thoroughfares are asphalted as a result of an agitation that began over a decade ago. Only lately the principal outlets of the city were ordered paved with that material—Federal street from Cooper Creek to Trent's fifth street, Haddon avenue from Line street to Ferry avenue, and Broadway from Emerald street to Newton Creek.

The Public Schools

Then there are the schools, which are educating an army of nearly 12,000 children. Four additional modern school buildings were recently completed, making in all thirty-four, with a common-

high school. As has already been shown by The Inquirer in a previous article, Camden's educational system is of the highest order, which has been demonstrated repeatedly by the pupils winning first prizes at contests in exhibitions of national prominence.

Camden is a city of churches. Within its confines there are close to a hundred churches and missions of all denominations. In consequence of this comparatively great church-going habit, the city is peculiarly strict on Sabbatharian questions. This was evidenced a year or so ago when certain dealers sought to sell on Sunday as on other days of the week. In consequence the laws were enforced to such an extent that the Sundays, for several months, favored the Zion Pure New England Sabbath of Puritan days.

When Andrew Carnegie was ridding himself of his wealth some years ago, establishing libraries in many cities of the country, it was suggested that he be asked to contribute something for the benefit of the book-loving public of Camden. For months this matter hung fire, but Dr. Dowling Benjamin finally

brought the subject to an issue by appealing to the Scotch ironmaster. As a result it was not long before \$100,000 was sent to Camden with which to build a library with the proviso that the city expend \$10,000 annually for its maintenance. This was agreed upon and a structure was erected at Broadway and Line streets that is not only pleasing to the eye because of architectural embellishments, but also on account of the thousands of volumes that are circulated to over 15,000 men, women and children.

City of Homes

Camden has approximately over 20,000 homes. These are of all kinds, from the more pretentious structures in which the wealthy reside to the humble but homelike dwellings in which the great bulk of the inhabitants live. And with the coming spring hundreds of additional dwellings will be erected in the outlying districts.

There is also a public park which is being slowly but surely developed, and if Mayor Charles H. Ellis has his way there will be several squares, a recreation pier or two and beautiful shade trees throughout the city. He proposes

to have one day each year set aside to be known as the "Day of the City Beautiful" devoted to making Camden better from an artistic and orderly standpoint.

As to Camden's business interests, they are legion. With a river front of several miles backed by the Cooper creek there is ample natural provision for industrial concerns of a varied character. A new era is heralded from the fact that the creek is to be deepened by the government so that craft of fairly deep draught may use it. Already a number of industrial manufacturing plants have situated their factories of locating along the banks of the stream and before many years there promises to be one complete chain of industries.

Just a Review

At the annual gathering of the Board of Trade last week the value of some of the city's manufactures was expressed something in this wise: "Camden has within its border a population of nearly 100,000, and shipbuilding firms that can either supply a launch or the greatest battleship; the largest lace curtain manu-

factory in America; a talking machine that speaks every known language; iron works that make enough pipe to girdle the earth; leather manufacturers that tan skins from all parts of the globe; the largest furniture house, whose products reach to the Philippines; banks and trust companies whose resources are not affected by panics; ironing works, which manufacture one-half the country's whole product; a plant whose kitchens annually make enough soup to float all the vessels built in our shipyards, a nickel works, which furnishes Uncle Sam with material for slot machines; a department store, whose experiment has proved a decided success; pen works, which produce two-thirds of the pens used in the world; an expanded metal works—the material produced there will stretch from Maine to Texas and its mills rival the largest.

factories in America; a talking machine that speaks every known language; iron works that make enough pipe to girdle the earth; leather manufacturers that tan skins from all parts of the globe; the largest furniture house, whose products reach to the Philippines; banks and trust companies whose resources are not affected by panics; ironing works, which manufacture one-half the country's whole product; a plant whose kitchens annually make enough soup to float all the vessels built in our shipyards, a nickel works, which furnishes Uncle Sam with material for slot machines; a department store, whose experiment has proved a decided success; pen works, which produce two-thirds of the pens used in the world; an expanded metal works—the material produced there will stretch from Maine to Texas and its mills rival the largest.

So, with the thousands of homes, its scores of industries, its charitable institutions and the manifold creations of a modern civilization, Camden is a city which is not slow, which is always in the van of progress and municipal improvement in all lines of endeavor.
